MOEEZ AHMAD KHAN

kmoeez2018@gmail.com • Lahore, Pakistan • moeezahmadkhan.com

Professional Objective

An **AI/ML Developer** specializing in **Generative AI** systems and full-stack architecture. Experienced in designing low-latency **Backend APIs**, implementing autonomous multi-agent frameworks (MCP), and engineering real-time computer vision pipelines. Adept at handling the entire product lifecycle—from raw model orchestration to **containerized cloud deployment** and monitoring.

Skills & Expertise

- **AI/ML & Orchestration:** Agentic AI, RAG Pipelines, Model Context Protocol (MCP), LLM Fine-Tuning (QLoRA), Workflow Automation (n8n), LLM Serving & Quantization, FAISS Vector DB.
- **Backend Development:** Node.js, Express, NestJS, TypeScript, Python, FastAPI, C++, SQL, RESTful APIs, WebSocket.
- **Cloud & Deployment:** AWS (EC2, Bedrock), GCP, Docker, Kafka, Nginx, CI/CD Pipelines, Linux/Ubuntu System Administration.
- **Frontend & Graphics:** React, Next.js, Flutter, Three.js, Blender, UI/UX Micro-Interactions, State Management.

Related Work Experience

Ecommerce Steem – AI Engineer *May 2026 – PRESENT*

- Architecting core **AI Chat Software** for high-end wearables (Whoop), focusing on ultra-low-latency and lightweight edge inference.
- Engineering a full-stack computer vision intelligence platform to track humans and animals in real time, delivering context-aware AI insights and real-time dashboard analytics.
- Designing interactive, full-stack application modules integrated with custom **Retrieval-Augmented Generation (RAG)** frameworks.
- Building custom automation pipelines utilizing the **Model Context Protocol (MCP)** to seamlessly bridge LLMs with external developer tools.

QUIDSol – AI & Computer Vision Developer *Nov 2025 – June 2026*

- **Project Horus (Student Identification):** Engineered an automated CV pipeline using **YOLO/SCRFD** for real-time face detection and **ArcFace** for secure identity assignment via **FAISS** vector matching.
- **Silmaril AI:** Developed a strategic platform for venture capital; built an AI-driven parsing engine to extract financial metrics from pitch decks, delivering automated growth recommendations, Company Scores, and Founder insights.
- Enhanced pipeline reliability by optimizing asynchronous data-flows to maintain accuracy across varied edge-case environments.
- Managed database logging and results triage to ensure high-speed processing across diverse production topics.

Teacher's Assistant *Information Technology University* *Nov 2025 – Feb 2026*

- Mentored graduate-level students in **Agentic AI**, providing hands-on guidance on autonomous multi-agent systems and RAG deployment.
- Facilitated technical workshops on agent orchestration and evaluated complex, student-led workflows for production-level scalability.

Education

Bachelor's in Computer Science (BSCS) *2021 – 2025*

Information Technology University (**ITU**), Lahore

Specialization: Agentic AI, Computer Vision, Reinforcement Learning

Featured 3D Portfolio

Interactive 3D Portfolio Website *moeezahmadkhan.com*

- Designed and developed a premium interactive personal brand site built using **Three.js** and custom **Blender** models.
- Implemented an integrated **AI Chatbot** to handle contextual user inquiries dynamically within the web experience.
- Deployed a high-fidelity Harry Potter theme to create an immersive, gamified environment showcasing production engineering projects.

Technical Projects

- **Query Sphere:** Developed a Flutter-based AI community system featuring real-time messaging layers, smart search querying capabilities, and seamless Firebase back-end integration.
- **Airbnb Replica:** Engineered a complete MERN stack application featuring dynamic property booking pipelines, dashboard management layers, and secure JWT session authentication.
